

Vernon Facilities Enhancements Update - Oct.14, 2022

- On September 9, 2022, the South Coast Air Quality Management District (“SCAQMD”) approved Sterigenics’ Early Action Reduction Plan (“EARP”).
- Sterigenics had commenced compliance with the provisions of the EARP even before it was approved by SCAQMD.
- The following measures have been implemented to further decrease potential Ethylene Oxide (“EO”) exposure and fugitive emissions from the Sterigenics Vernon facilities:
 - Erection of temporary enclosures
 - Improved processes to monitor and minimize opening of interior and exterior doors
 - Implementation of expanded, robust data monitoring inside and outside the building so possible fluctuations in EO levels can be monitored, investigated and, if necessary, addressed in real time
- Sterigenics continues to implement the remaining provisions of the EARP with the goal of implementing the EARP in full, ahead of schedule.
